

Amin Abdi

Front-End Developer

Front-end developer building large-scale enterprise web applications with React, Next.js, and TypeScript. Currently working on Iran Insurance's national platform, serving around 1.5 million users, where I built issuance and claims flows across fire, travel, engineering, and motor insurance products, a config-driven charts dashboard, and a 10+ role access management panel. Focused on clean architecture, maintainable component systems, and improving user flows.

EXPERIENCE

Front-End Developer

Simorgh Intelligent Business Ideas · Tehran · December 2023 – Present

Iran Insurance Platform sib.iraninsurance.ir

Next.js · TypeScript · Insurance Issuance & Claims Flows · Config-Driven Architecture · RBAC · Data Dashboard

National insurance platform with a public site and internal panels, serving around 1.5 million users.

- Built the insurance charts dashboard on a config-driven architecture, so new charts can be added or modified through configuration instead of rewriting code.
- Delivered 5 dashboard charts covering payment and policy issuance data, giving super-admin users a visual view of system activity for decision-making.
- Designed and built the role and access management panel (RBAC) from scratch, covering 10+ user roles including super admin, admin, SRM, provincial and branch representatives, and experts.
- Redesigned issuance flows across fire insurance plans (Mehr, Asnaf, Hami), travel, and engineering insurance, improving the user experience and reducing user errors.
- Rebuilt claims flows for motor own-damage and third-party liability insurance.
- Designed and implemented the flows for industrial estate and industrial property insurance products.

C Application

React · TypeScript

Payment services super-app covering mobile top-ups and data packages, bill payments, and flight ticket purchases.

- Developed core admin panel features with React and TypeScript, building scalable components for user management and system operations with a focus on maintainability and performance.

PERSONAL PROJECTS

Wedon

React · TypeScript · React Query · Context API · Zod · PWA · RTL

A mobile-first, RTL platform for social responsibility initiatives. First version complete, not yet launched.

- Built the front-end end to end as a personal project with React, TypeScript, React Query, and the Context API, including integration with the backend API.
